

Standards of education and training and Standards of education and training guidance – consultation document

Introduction

We are consulting on revised standards of education and training (SETs) and revised standards of education and training guidance. The standards of education and training are the standards against which the Health Professions Council (HPC) assesses education and training programmes.

We first published the SETs in 2004, and began operating our new programme approvals process. We published guidance for the SETs in 2006. We committed then to review the SETs and guidance after a suitable period of time.

An education and training programme which meets the SETs allows a student who successfully completes that programme to meet the standards of proficiency. They are then eligible to apply to the HPC for registration.

The Education - Approvals and Monitoring Department is responsible for conducting approval visits to education providers to ensure their programmes meet the SETs. If a programme meets the SETs we grant open-ended approval, subject to ongoing checks via the annual monitoring and major change processes.

Annual monitoring is a retrospective, documentary process to determine whether a programme continues to meet the standards of education and training. If any changes are made which significantly impact on the provision of the programme we consider these via our major change process to make sure that the SETs continue to be met.

We have also produced supplementary information documents for education providers when preparing for an approval visit, completing annual monitoring submissions, or making significant changes to programmes. These documents give more information about the methods we use to assess programmes against the SETs.

Reviewing the Standards of education and training

At its meeting on 31 May 2007, the HPC's Council agreed a workplan to review the SETs. In order to conduct the review we invited organisations to nominate an individual to be part of a Professional Liaison Group (PLG).

The PLG was made up of representatives of professional bodies, representatives of education providers, and HPC Council members. The group met four times between September 2007 and February 2008.

The group benefited from the input of professional bodies, education providers, visitors and students, who either responded to a questionnaire or attended one of the group's meetings to provide their feedback.

We would like to thank the following people for their involvement as members of the PLG:

Anne Burge	Federation for Healthcare Science
Helen Davis	Orthoptist registrant member of the HPC Council
Julie Farmer	Allied Health Professions Federation
Tony Hazell	Lay member of the HPC Council
Lisa Hughes	Department of Health
Carol Lloyd	Occupational therapist alternate member of the HPC Council and Chair of the PLG
Mary Lovegrove	Council of Deans of Health
Susan Shandley	NHS Education for Scotland
Jim Petter	British Paramedic Association
Barbara Stuart	Lay member of the HPC Council
Annie Turner	Occupational therapist registrant member of the HPC Council
Diane Waller	Arts therapist registrant member of the HPC Council
Neil Willis	Biomedical scientist registrant member of the HPC Council

Proposed changes to the standards of education and training and standards of education and training guidance

The changes and additions to the SETs and SETs guidance have been proposed following the discussions of the PLG, which were informed by the feedback we have received over the last four years from those who have been using the SETs and SETs guidance.

We used the feedback to clarify some of the SETs and reword some of the guidance. Some parts of the SETs have been reordered so they are grouped together in a more user-friendly way. Some parts of the SETs and SETs guidance have been removed because they were considered unnecessary or duplicated information elsewhere.

We are consulting on both the SETs and the SETs guidance. We need to know whether the SETs meet their purpose and whether the guidance helps to clarify how the SETs can be met.

It is essential that the SETs and SETs guidance are applicable to all of the professions that we currently regulate as well as those that we may regulate in the future. We would particularly welcome responses from professions we may regulate in the future.

The 'Further information' section at the end of the document is provided for information only. The documents listed are not endorsed or recommended by us and we cannot accept any responsibility for the availability or contents of any of these materials or linked websites. The list is not intended to be definitive and if any organisation would like to add, amend, update or remove documents, please advise us.

To make the consultation document more manageable we have provided the revised SETs separately to the SETs guidance. The SETs, with a revised introduction, can be found on pages 6 to 10. The SETs guidance can be found on pages 11 to 60.

Alterations and amendments

It was felt that the six sections that the SETs are divided into were still appropriate. It is intended that they will remain:

- SET 1: Level of qualification for entry to the Register;
- SET 2: Programme admissions;
- SET 3: Programme management and resource standards;
- SET 4: Curriculum standards;
- SET 5: Practice placement standards; and
- SET 6: Assessment standards.

The following substantial alterations and amendments were made to the original SETs and SETs guidance and are highlighted here for ease of reference:

SET 1

- SET 1.1.1, 1.1.2, and 1.1.3 (p. 15) now refer to parts of the Register.

SET 2

- SET 2.2.1 (p.19) is amended to include reading English, along with written and spoken English. The revised guidance includes a new paragraph to support this proposed change.
- SET 2.3 (p.21). The terminology used here requires updating. We now refer to 'equality and diversity policies' rather than 'an equal opportunities and anti-discriminatory policy'.

SET 3

- SET 3.3 (p.23) is new. It was felt that monitoring and evaluation systems should be a specific requirement within the area of programme management and resources.
- SET 3.4 (p.24) has been reworded for clarity.
- SET 3.8 (p.26) combines both SETs 3.7 and 3.12 of the existing standards relating to resources being available in all settings.
- SET 3.10.3 (p.27) is a new SET requiring all education providers to have a student complaints process in place.
- SET 3.13 (p.29) is a new SET. The purpose of this SET is for education providers to be able to respond to a student who may have issues with profession-related conduct without calling into question their academic ability.

SET 4

- SET 4.5 (p.34) is a new SET requiring an understanding of the HPC standards of conduct, performance and ethics.

SET 5

- The existing SET 5.3.2 is removed because it is covered by the other SETs.
- SET 5.8 (p.43) incorporates the existing SETs 5.10 and 5.11.

SET 6

- SET 6.1 (p.46) is reworded to refer to the standards of proficiency rather than fitness to practise because this can be part of the strategy and design of a programme.
- SET 6.5 (p.47) is reworded so that it is clear that there is an objective system for grade-assessment criteria.
- SET 6.7.2 (p.49) is reworded to remove the double negative in the current standard.

Your response

We would welcome your comments on the revised SETs and SETs guidance, in whatever format is convenient for you. You may wish to address the questions below. However, if there are any other comments you would like to make we will be happy to take these on board.

1. Are the alterations to the SETs and SETs guidance appropriate?
2. Are additional SETs required?
3. Is more guidance required?
4. Is the guidance clear?
5. Do any standards or parts of the guidance need to be amended to ensure they are applicable to future professions?

In addition, we would welcome your comments on how our standards and guidance might better support service user involvement and input into the development and delivery of approved programmes.

We would like to invite any individual or organisation with an interest in these issues to respond to this consultation. To help ensure we analyse your response correctly it would be helpful if you could explain how you formulated your response.

The consultation will put the proposed SETs and SETs guidance before a wide range of stakeholders, including education providers, professional bodies and others with an interest in our work. We would like to invite any individual or organisation with an interest in these issues to respond to this consultation. The consultation will run until **Friday 14 November 2008**.

If you would like to respond to this consultation, please send your written response to:

SETs Consultation
Policy and Standards Department
Health Professions Council
Park House
184 Kennington Park Road
London
SE11 4BU

You can also email consultation@hpc-uk.org or send your response by fax to +44 (0)20 7582 0866.

At the end of the consultation period we will publish a summary of the responses we receive, and the decisions we have taken as a result, on our website.

If you prefer your response not to be made public, please indicate this when you respond.

We look forward to receiving your comments.

Eileen Thornton
Chair, Education and Training Committee

Standards of education and training

Introduction

This document sets out the standards of education and training (SETs). These are the standards against which we assess education and training programmes.

A programme which meets the standards of education and training allows a student who successfully completes that programme to meet the standards of proficiency. They are then eligible to apply to the Health Professions Council (HPC) for registration.

The Education - Approvals and Monitoring Department is responsible for conducting approval visits to education providers to ensure their programmes meet the SETs. If a programme meets the SETs we grant open-ended approval, subject to ongoing checks via the annual monitoring and major change processes.

Annual monitoring is a retrospective, documentary process to determine whether a programme continues to meet the standards of education and training. If any changes are made which significantly impact on the provision of the programme we consider these via our major change process to make sure that the SETs continue to be met.

We have also produced supplementary information documents for education providers when preparing for an approval visit, completing annual monitoring submissions, or making significant changes to programmes. These documents give more information about the methods we use to assess programmes against the SETs.

Standards of education and training

1. Level of qualification for entry to the Register

1. 1 The Council normally expects that the threshold entry routes to the Register will be the following:

1. 1. 1 Bachelor degree with honours for:

- biomedical scientists (with the Certificate of Competence awarded by the Institute of Biomedical Science, or equivalent);
- chiropodists / podiatrists;
- dietitians;
- occupational therapists;
- orthoptists;
- physiotherapists;
- prosthetists / orthotists;
- radiographers; and
- speech and language therapists.

1.1.2 Masters degree for arts therapists.

1.1.3 Masters degree for clinical scientists (with the Certificate of Attainment awarded by the Association of Clinical Scientists, or equivalent).

1.1.4 Diploma of Higher Education for operating department practitioners.

1.1.5 Equivalent to Certificate of Higher Education for paramedics.

2. Programme admissions

The admissions procedures must:

2.1 give both the applicant and the education provider the information they require to make an informed choice about whether to take up or make an offer of a place on a programme.

2.2 apply selection and entry criteria, including:

- 2.2.1 evidence of a good command of reading, writing and spoken English;
- 2.2.2 criminal convictions checks;
- 2.2.3 compliance with any health requirements;
- 2.2.4 appropriate academic and/or professional entry standards; and
- 2.2.5 accreditation of prior (experiential) learning and other inclusion mechanisms

2.3 ensure that the education provider has equality and diversity policies in relation to applicants and students, together with an indication of how these will be implemented and monitored.

3. Programme management and resource standards

3.1 The programme must have a secure place in the education provider's business plan

3.2 The programme must be effectively managed.

3.3 The programme must have regular monitoring and evaluation systems in place.

3.4 There must be a named person who has overall professional responsibility for the programme who should be appropriately qualified and experienced and, unless other arrangements are agreed, be on the relevant part of the Register.

3.5 There must be an adequate number of appropriately qualified and experienced staff in place to deliver an effective programme.

3.6 Subject areas must be taught by staff with relevant specialist expertise and knowledge.

3.7 A programme for staff development must be in place to ensure continuing professional and research development.

3.8 The resources to support student learning in all settings:

3.8.1 must be effectively used; and

3.8.2 must effectively support the required learning and teaching activities of the programme.

3.9 Learning resources (including the stock of periodicals and subject books), and IT facilities (including internet access), must be appropriate to the curriculum and must be readily available to students and staff.

3.10 There must be:

3.10.1 adequate and accessible facilities to ensure the welfare and wellbeing of students in all settings;

3.10.2 a system of academic and pastoral student support in place; and

3.10.3 a student complaints process in place.

3.11 Where students participate as service users in practical and clinical teaching, appropriate protocols must be used to obtain their consent.

3.12 Throughout the course of the programme, the education provider must have identified where attendance is mandatory and must have associated monitoring mechanisms in place.

3.13 There must be a process in place for dealing with concerns about students' profession-related conduct.

4. Curriculum standards

- 4.1 The learning outcomes must ensure that those who successfully complete the programme meet the standards of proficiency for their part of the Register.
- 4.2 The programme must reflect the philosophy, core values, skills and knowledge base as articulated in any curriculum guidance for the profession.
- 4.3 Integration of theory and practice must be central to the curriculum.
- 4.4 The curriculum must remain relevant to current practice.
- 4.5 The curriculum must make sure that students understand the HPC's Standards of conduct, performance and ethics, and their impact on practice.
- 4.6 The delivery of the programme must:
- 4.6.1 support and develop autonomous and reflective thinking; and
 - 4.6.2 encourage evidence-based practice.
- 4.7 The range of learning and teaching approaches used must be appropriate to the effective delivery of the curriculum.
- 4.8 When there is inter-professional learning the profession-specific skills and knowledge of each professional group must be adequately addressed.

5. Practice placement standards

- 5.1 Practice placements must be integral to the programme.
- 5.2 The number, duration and range of practice placements must be appropriate to support the delivery of the programme and the achievement of the learning outcomes.
- 5.3 The practice placement settings must provide a safe and supportive environment.
- 5.4 The education provider must maintain a thorough and effective system for approving and monitoring all practice placements.
- 5.5 The placement providers must have equality and diversity policies in relation to students, together with an indication of how these will be implemented and monitored.
- 5.6 There must be an adequate number of appropriately qualified and experienced staff at the practice placement setting.
- 5.7 Practice placement educators must:
- 5.7.1 have relevant knowledge, skills and experience;
 - 5.7.2 undertake appropriate practice placement educator training; and
 - 5.7.3 unless other arrangements are agreed, be appropriately registered.
- 5.8 There must be collaboration between the education provider and the practice placement provider

5.9 Students, practice placement providers and practice placement educators must be fully prepared for placement which will include information about an understanding of:

- 5.9.1 the learning outcomes to be achieved;
- 5.9.2 the timings and the duration of any placement experience and associated records to be maintained;
- 5.9.3 expectations of professional conduct;
- 5.9.4 the assessment procedures including the implications of, and any action to be taken in the case of, failure; and
- 5.9.5 communication and lines of responsibility.

5.10 Learning, teaching and supervision must encourage safe and effective practice, independent learning and professional conduct.

5.11 A range of learning and teaching methods that respect the rights and needs of service users and colleagues must be in place throughout practice placements.

6. Assessment standards

6.1 The assessment strategy and design must ensure that the student can achieve the standards of proficiency for their part of the HPC Register.

6.2 All assessments must provide a rigorous and effective process by which compliance with external-reference frameworks can be measured.

6.3 Professional aspects of practice must be integral to the assessment procedures in both the education setting and practice placement setting.

6.4 Assessment methods must be employed that measure the learning outcomes and skills required to practise safely and effectively.

6.5 The measurement of student performance must be objective and ensure fitness to practise.

6.6 There must be effective monitoring and evaluation mechanisms in place to ensure appropriate standards in the assessment.

6.7 Assessment regulations must clearly specify requirements for:

- 6.7.1 student progression and achievement within the programme;
- 6.7.2 approved programmes being the only programmes which contain any reference to an HPC protected title, or part of the Register, in their named award;
- 6.7.3 an aegrotat award not to provide eligibility for admission to the Register;
- 6.7.4 a procedure for the right of appeal for students; and
- 6.7.5 the appointment of at least one external examiner from the relevant part of the Register, unless other arrangements are agreed.

Introduction

About this document

This document has been written to supplement our approval and monitoring processes. It provides guidance on our standards of education and training (SETs), in order to give more information about how we will assess programmes against our standards. It is written for education providers who are preparing for an approval visit, for a major change submission, or for their annual monitoring submission. This document will also be useful for practice placement providers with whom education providers work in collaboration.

Throughout the document, 'we' refers to the Health Professions Council, and 'you' refers to staff working on an approved programme, or a programme that is seeking approval. Where the abbreviation 'SET' followed by a number is used, this refers to a specific standard of education and training.

As part of the approval and monitoring processes we assess the programme against the SETs to ensure that upon qualification, all students meet our standards of proficiency (SOPs). This document provides guidance on the SETs. The detail provided against each standard suggests how you could show that you meet the standards.

Although you do not have to use this document, we recommend that you do so, as it has been put together to give you advice on the evidence you will need to refer to when going through any of the approval and monitoring processes.

About us (the Health Professions Council)

We are the Health Professions Council (HPC) and we were set up to protect the public. To do this, we keep a register of health professionals who meet our standards for their training, professional skills, behaviour and health.

We currently regulate 13 health professions:

- arts therapists;
- biomedical scientists;
- chiropodists and podiatrists;
- clinical scientists;
- dietitians;
- occupational therapists;
- operating department practitioners;
- orthoptists;
- paramedics;
- physiotherapists;
- prosthetists and orthotists;
- radiographers; and
- speech and language therapists.

We may regulate other professions in the future. For an up-to-date list of the professions we regulate, please see our website at www.hpc-uk.org

Our Register is available on our website for anyone to search, so that they can check the registration of their health professional.

Our key functions

In order to protect the public, we:

- set standards for the education and training, professional skills, conduct, performance, ethics, and health of registrants;
- keep a register of health professionals who meet those standards;
- approve programmes which health professionals must complete in order to register with us; and
- take action when health professionals on our Register do not meet our standards.

The Health Professions Order says that we must set our standards to protect the public, and that we must set standards which are necessary for safe and effective practice. This is why our standards are set at a 'threshold' level.

When you are developing your programme, you may also want to refer to documents published by other organisations which take a role in developing good practice, for example, professional bodies, the Quality Assurance Agency (QAA) for Higher Education, QAA Scotland and NHS Education for Scotland (NES).

Documents published by other organisations

For your information, throughout this document we have mentioned other documents that may be useful to you in providing extra information. This does not mean that we have 'approved' these documents, but they may be helpful when you are collecting evidence to show how you meet our standards.

Working with professional bodies

Professional bodies have an important role in promoting and representing their professions. In particular, professional bodies may develop the learning and curriculum frameworks for their profession. In this document, we have referenced the curriculum documents published by professional bodies which will provide useful information, background and context.

The structure of this document

We have divided up the body of this document into six sections, to reflect the six sections of the standards of education and training.

Under the title of each standard is a summary, which summarises the areas that the standard is concerned with. There is then a heading called 'Overall guidance' which gives guidance for the whole of the standard, including information about how you can show that you meet the standards – the type of documents you can provide, or who we may want to meet on an approval visit. This is followed by a heading called 'More information'. Here we mention any other documents which may be useful to education providers in finding more information related to the whole of the standard. Certain documents, like the professional body curriculum, may have relevant information in them which relates to so many standards that, in order to save space, we have not referenced them every time, but instead have given a list at the end of the document.

We have also provided a list of 'Example questions'. These are questions that you may want to consider for some or all of our approval and monitoring processes. We will not normally ask all of these questions, and may not use the example questions at all, but we have provided them to give you an idea of the sort of questions that may arise during the approval and monitoring process. Please note that the list of questions is not a complete list, and other questions may be asked to make sure that the standards are being met.

The final and most substantial section is called 'Detailed guidance'. Here, we have broken down each standard of education and training into its individual, numbered parts. Each part is in a table like the one below.

1 This box contains the standard title, for example, 'Assessment standards'
1. 1 This box contains the full text of the relevant standard of education and training.
<p>Guidance This box contains guidance on the standard. This may include the rationale behind the standard, and examples and suggestions of the type of evidence to provide.</p>
<p>Other sources of guidance This box occurs after some of the standards and lists other documents which may contain more background information on possible ways of meeting the standard.</p> <p>Here, as with the 'More information' for the whole of the standard, you will find that certain documents may have relevant information in them which relates to so many standards that we have not referenced them against each one separately, but instead have given a list at the end.</p>

SET 1: Level of qualification for entry to the Register

Summary

This standard is concerned with the qualifications needed to be eligible to apply to register with us.

Overall guidance

This does not apply.

More information

- Quality Assurance Agency for Higher Education, A framework for higher education qualifications in England, Wales and Northern Ireland
- QAA Scotland, A framework for higher education qualifications in Scotland
- Quality Assurance Agency for Higher Education, Subject benchmark statements
- Scottish Credit and Qualifications Framework
- National Qualifications Framework in England, Wales and Northern Ireland
- Credit and Qualifications Framework in Wales
- QAA Scotland, Scottish benchmark statements

Example questions

- How is the MA different from the PG Dip?
- Is there an exit route other than BSc or MA?

Detailed guidance

1 Level of qualification for entry to the Register

1. 1 The Council normally expects that the threshold entry routes to the Register will be the following:

1. 1. 1 Bachelor degree with honours for:

- biomedical scientists (with the Certificate of Competence awarded by the Institute of Biomedical Science, or equivalent);
- chiropodists / podiatrists;
- dietitians;
- occupational therapists;
- orthoptists;
- physiotherapists;
- prosthetists / orthotists;
- radiographers; and
- speech and language therapists

1.1.2 Masters degree for arts therapists.

1.1.3 Masters degree for clinical scientists (with the Certificate of Attainment awarded by the Association of Clinical Scientists, or equivalent).

1.1.4 Diploma of Higher Education for operating department practitioners.

1.1.5 Equivalent to Certificate of Higher Education for paramedics.

Guidance

We expect that most of the programmes on our approved list will be at the standard which we have outlined above, but we realise that there may be some

exceptions. We have set the level above for each profession, based on what we think is needed for people who successfully complete the programme to meet all of the standards of proficiency.

This standard contains the word 'normally' and some of the entry routes include the word 'equivalent'. This is to show that you may be able to design a programme which leads to a different qualification from that above, but which meets the rest of the standards of education and training, and the standards of proficiency, so can still be approved by us.

SET 2: Programme admissions

Summary

This standard is about the admissions procedures for your programme, including the selection procedure and the information provided to those involved.

Overall guidance

Examples of the kind of information that you could provide include:

- the information that is made available to applicants;
- information handed out at open days or interviews;
- any 'welcome pack' or 'information pack' provided to successful applicants;
- a copy of your advertising material; or
- a relevant website address.

We will want to be assured that you review your admission procedures to ensure they are effective. So, you may want to provide information about how you analyse application and admission patterns.

It is important that your admissions staff and your applicants understand that, when you assess applications, you are checking that person's suitability to do your programme, and that you are not assessing or giving any assurances about whether they will eventually be registered. This particularly applies to the sections of this standard which refer to criminal conviction checks and health requirements.

Admissions staff and applicants should be aware that the offer of a place is not a guarantee of HPC registration at the end of the programme.

When someone applies to us for registration, we will look at their application individually, and make a decision about their registration based on their individual circumstances. We cannot offer future guarantees of registration, or decide that a future application for registration would definitely not be successful.

More information

- Health Professions Council, Information about the health reference
- Quality Assurance Agency for Higher Education, Code of practice for the assurance of academic quality and standards in higher education: Admissions to Higher Education
- Quality Assurance Agency for Higher Education, Guidelines on the accreditation of prior learning
- Quality Assurance Agency for Higher Education, Code of practice for assurance of academic quality and standards in Higher Education: students with disabilities

Example questions

- What information do you give to applicants about the programme, and in what formats?
- How do you make sure that students reach International English Language Testing System (IELTS) 7.0 when they complete the programme?
- What are your English language requirements?
- Have you explained your criminal records check?
- How do you make sure that overseas applicants go through the same relevant checks as applicants from the European Union?
- What arrangements do you have to make initial health checks and any immunisations that are needed?
- Do you give credit to applicants with accredited prior (experiential) learning (AP(E)L)?
- What is the process for assessing an applicant's AP(E)L? How often do you do it?
- How do you monitor your equality and diversity policies?
- How do you tell applicants and students about your equality and diversity policies?

Detailed guidance

2 Programme admissions

The admissions procedures must:

2.1 give both the applicant and the education provider the information they require to make an informed choice about whether to take up or make an offer of a place on a programme.

Guidance

All of your entry requirements should be clearly set out in the information you make available to interested applicants.

You may want to provide information to show how you tell applicants about accommodation costs, funding arrangements such as bursaries and loans and any other costs (such as personal therapy for arts therapists). You will also need to provide information about:

- any costs that applicants will need to meet (for example to cover criminal record checks, health checks and immunisations);
- the length and possible location of practice placements;
- whether they will need to stay away from the main site of programme delivery; and
- their travel, and how this is funded.

We will want to know what information you request from an applicant and your reason for requesting that information. We do not specify detailed information that you must request from an applicant, but we will want to be satisfied that it is sufficient for an appropriate choice to be made as to whether or not to offer a place on a programme.

You should make sure that your documents clearly tell applicants and students

that completing the programme means they are 'eligible to apply' for registration with us. Phrases like 'completing this programme entitles you to be registered with the HPC' or 'once you have completed this programme, you will be registered' are misleading, as all students need to apply to register after they have completed their programme.

See the guidance under SET 2.2 and SET 2.3 to make sure applicants understand that an offer of a place does not show that they automatically meet our standards, or that they will be registered with us in the future.

2 Programme admissions

The admissions procedures must:

2.2 apply selection and entry criteria, including:

2.2.1 evidence of a good command of reading, writing and spoken English;

Guidance

Your English language requirements should be clearly set out in the information made available to applicants. These requirements should be appropriate to the level and content of the programme. We realise that the requirements for applicants who do not have English as their first language will differ to native English speakers. Applicants whose first language is English will not normally need to provide evidence of meeting an IELTS standard or equivalent, but may be required by you to have passed English at GCSE or equivalent.

We do not require you to interview applicants to your programme. However, we will want to see that your selection and entry criteria contain a rigorous process to assess reading, written and oral skills so that students can take full advantage of a programme from the start.

Please also refer to the standard of proficiency 1b.3 that outlines English communication requirements for registrants. Any English language requirements you set at the beginning of the programme should take account of the fact that at the end of the programme, all students must meet the required level of English proficiency for the standards of proficiency for their profession.

2 Programme admissions

The admissions procedures must:

2.2 apply selection and entry criteria, including:

2.2.2 criminal convictions checks;

Guidance

You should run checks on all applicants. These would normally be through the Criminal Records Bureau, Disclosure Scotland, Access Northern Ireland, or, where appropriate, an equivalent international body. We would expect that this would be an 'enhanced' level disclosure or equivalent, due to the positions of responsibility in which health professionals are placed.

See the comments above in the general guidance for this standard, about the role of your staff in assessing applicants for your programme, and not for registration.

We will want to see what you would do if an applicant declares a criminal conviction. If you are considering an application from someone who has a criminal conviction, you may find it helpful to refer to our Standards of conduct, performance and ethics, and consider if any criminal conviction might affect that

person's ability to meet those standards.

You may also find it helpful to consult your practice placement providers to find out if they would be willing to offer an applicant with a criminal conviction a place. We will want to see what procedures you have in place if practice placement providers are not willing to offer a student a place after you have already accepted them as a student.

Although we do not require that criminal conviction checks continue through the length of the programme, please see SET 3.13 for more guidance on this issue.

2 Programme admissions

The admissions procedures must:

2.2 apply selection and entry criteria, including:

2.2.3 compliance with any health requirements;

Guidance

Your health requirements should be clearly set out in the information made available to applicants. These requirements should be appropriate to the programme content and delivery, including the practice placements. Such requirements could include vaccinations and occupational health assessments.

Requirements vary across the professions and we will want to see that you give applicants clear information. For example, some programmes will need students to have immunisations while others will not. It is your responsibility to make sure all reasonable steps have been taken to comply with any health requirements.

Our guidance document, 'A disabled person's guide to becoming a health professional', provides information for disabled people applying to approved programmes, and for admissions staff considering applications from disabled people.

We have also published a document called 'Information about the health reference' with information for applicants and doctors about the health reference.

See the comments in the general guidance for this standard, about the role of your staff in assessing applicants for your programme, and not for registration.

2 Programme admissions

The admissions procedures must:

2.2 apply selection and entry criteria, including:

2.2.4 appropriate academic and/or professional entry standards; and

2.2.5 accreditation of prior (experiential) learning and other inclusion mechanisms.

Guidance

We will want to be assured that your academic and professional entry standards, including those regarding literacy and numeracy, are appropriate to the level and content of the programme. We will want to view evidence of how these standards are communicated to applicants and how they are applied.

We will want to be assured that your AP(E)L scheme and inclusion mechanisms (such as Foundation Degrees, direct entry, feeder routes, advanced standing, Higher National Diplomas and Higher National Certificates) are made available to

applicants and students. We will also want to make sure that students who are eligible for AP(E)L or another inclusion mechanism are able to meet the standards of proficiency for their profession when they successfully complete the programme. We will need to be assured that students' prior learning is mapped against the learning outcomes for a programme or individual modules.

You may want to show how you explain your AP(E)L and inclusion policies to applicants and students, the policy and procedure for agreeing and awarding credits, indication of limits and the associated costs.

Other Guidance

- European Credit Transfer System
- Quality Assurance Agency for Higher Education, Guidelines on the accreditation of prior learning
- Quality Assurance Agency for Higher Education, Facilitating credit-based links in Scottish higher education: Guidelines to support colleges and higher education institutions

2 Programme admissions

The admissions procedures must:

2.3 ensure that the education provider has equality and diversity policies in relation to applicants and students, together with an indication of how these will be implemented and monitored.

Guidance

We will need to be assured that you have appropriate equality and diversity policies.

Your department, school or programme may have its own equality and diversity policies, or your education provider may have a policy that applies to you. We will want enough evidence to show that you have policies in place and that they are put into practice and monitored.

We will also want to be assured that these policies are made available to students (for example, in the student handbook or on a website) with information about what an applicant or student should do if they feel that they have been discriminated against.

SET 3: Programme management and resource standards

Summary

This standard is about managing the programme, and the resources available to the academic, support and placement staff, and to the students on the programme.

Overall guidance

On an approval visit, we will usually take note of the on-site resources available during the tour of resources. You might want to use the tour to tell us about facilities which you feel meet the standards particularly effectively. In the annual monitoring and major change processes, documentary evidence such as building plans and lists of resources available could be provided.

We will want you to provide evidence about how well the policies and procedures that you outline in your documents are working in practice. Evidence regarding how practice placement educators manage placements, and the resources available during placements, may be relevant to this standard as well.

We may require information from your education provider's senior managers regarding SET 3.

More information

- Quality Assurance Agency for Higher Education, Code of practice for the assurance of academic quality and standards in Higher Education

Example questions

- Do you use visiting lecturers? If so, how do you include them in your quality assurance systems?
- Do you have annual staff appraisals?
- Do you use peer-observation as part of staff development? If so, do you use comments in staff appraisals?
- Do students participate, as service users, in teaching? If so, how do you get their consent?
- How do you monitor student attendance?
- If students do not attend, how will you deal with this?
- Can students access information technology and library resources when off site or at weekends?

Detailed guidance

3 Programme management and resources

3.1 The programme must have a secure place in the education provider's business plan.

Guidance

We would normally want to see a business plan, to make sure that the programme is secure within the education provider, is not under any threat, and that it has enough support.

A 'secure place' means that:

- the education provider is committed to providing enough resources to deliver the programme;
- the risks or threats to delivering the programme are currently minimal; and

- there is a future for the programme.

The information for this SET may need to be requested from senior managers of your education provider. There must be clear information about partnerships with other education providers.

As part of your documents, you may want to include funding or planning information as returned to HEFCE, SFC, HEFCW, DELNI or Department of Health Commissioners, if appropriate.

You could, for example:

- explain the context of your programme, for example, in terms of how it fits with its research profile and strategy;
- show how you manage programmes with providers of practice-based learning, to make sure that they are effectively developed, delivered and reviewed; and
- explain your processes for reviewing the way your programme is delivered and the related need for development.

3 Programme management and resources

3.2 The programme must be effectively managed.

Guidance

Evidence might include:

- the programme handbook;
- an outline of the management structure; and
- role descriptions.

We will want to see evidence of the programme management structure. This may include the lines of responsibility and the links to the management of practice placement providers, highlighting the roles and responsibilities of all parties.

If the programme proposal is new, we must be convinced that there are effective systems in place to manage the programme and that individuals involved have the skills and expertise they need to work within these systems.

If there is a partnership with another person or organisation to deliver the academic content of the programme (for example, another education provider, or where an employer employs the academic staff as well as the practice placement educators), we will ask to see the partnership agreement and find out which regulations and procedures apply to students and staff. We will want to be assured that there are clear procedures to deal with any problems in this area, and these should be clearly written into any partnership agreement.

3 Programme management and resources

3.3 The programme must have regular monitoring and evaluation systems in place.

Guidance

Evidence might include:

- annual or routine monitoring requirements and reports;
- external examiners' reports and your response to these reports;
- a critical review of current arrangements;
- analysis of student feedback through module evaluations, placement evaluations, programme committees, and staff-student liaison committees;

- feedback through placement audits and evaluations, and partnership meetings;
- analysis of tutor feedback through module evaluations, programme committees, and annual reports;
- quality audits of practice placements; and
- clear action plans and evidence of the action taken.

We will want you to explain how you carry out a self-evaluation of the programme's effectiveness. We will use the documents from your monitoring and evaluation system (including internal and external evaluations) in our annual monitoring of the programme, once approved.

To avoid duplication, you may use the same documentation you use for internal processes or give to other bodies. We will want to see that the monitoring and evaluation systems (for example, internal quality audits, external examiner reports, and student feedback) are appropriate to, and effective for, the programme. You should show how you use the systems you currently have in place, rather than develop new systems.

3 Programme management and resource standards

3.4 There must be a named person who has overall professional responsibility for the programme who should be appropriately qualified and experienced and, unless other arrangements are agreed, be on the relevant part of the Register.

Guidance

You must show how the named person with overall professional responsibility for the programme is 'appropriately qualified and experienced'.

Along with a copy of that individual's curriculum vitae (CV), you might want to include evidence of:

- previous effective programme leadership;
- an ability to effectively organise the delivery of the programme;
- a professional qualification; or
- an educational qualification.

This person will normally be registered with us. However, we recognise that it may be possible for a programme to be led by someone who is not registered on the relevant part of the Register. If this is the case, you should include more detail about their qualifications and experience. If they are not registered, you must make sure that their job title does not include a protected title or give the impression that they are registered with us.

If the named person with overall responsibility for the programme is registered with us, but is not registered in the relevant profession, we will want to see how you make profession-specific information and resources available to support them in their role.

3 Programme management and resource standards

3.5 There must be an adequate number of appropriately qualified and experienced staff in place to deliver an effective programme.

Guidance

We will want to be sure that the number of staff is appropriate for the effective

delivery of the programme. We do not set staff to student ratios. Instead, we will look at the staffing within the overall context of your education provision. This would include, for example, looking at the involvement of your staff in other programmes in the same profession, your expected research, or your inter-professional learning and teaching. We will need information on what administrative, pastoral, management or technical staff are in place to support the programme and, if appropriate, information on their experience and qualifications.

We will also consider the number of students on the programme and the frequency that the programme runs.

We will also want to make sure that there are contingency provisions in place. These should show how you deal with situations such as staff absence.

You will probably want to take account of the practical requirements of your programme, and the possible need for teaching in small groups, when deciding how many staff are needed. You may also want your staff to have clinical as well as academic experience.

The information that you give us about staffing at your placements (SET 5.6) will also be relevant to this standard.

See the guidance under SET 3.2.

3 Programme management and resource standards

3.6 Subject areas must be taught by staff with relevant specialist expertise and knowledge.

Guidance

The CVs of your staff will probably contain the information required for this SET.

You will need to show us that the staff on the programme team, and any other people who help to deliver the programme (such as sessional or guest lecturers), are qualified to deliver the programme. We do not specify the precise expertise and knowledge that are needed to deliver certain aspects of your programme, as we feel that this may change as good practice develops.

We will also consider the input from specialist visiting lecturers and the expertise and knowledge that they bring to the programme, balanced against the quality of delivery and continuity of students' experience. If visiting lecturers teach on your programme, we will want to know how you guarantee the quality of their teaching.

3 Programme management and resource standards

3.7 A programme for staff development must be in place to ensure continuing professional and research development.

Guidance

It is important that all staff, including part-time staff, practice placement educators and visiting lecturers, have the opportunity to develop and maintain their professional skills. It is particularly important that skills appropriate to the relevant profession are kept up-to-date, to allow them to continue to deliver the programme effectively.

We will want to be assured that there is a staff development policy and that

individuals keep up-to-date with guidance from relevant professional bodies. This could be supported by examples of:

- staff-development strategies;
- CVs;
- staff-appraisal systems;
- staff profiles;
- professional-development portfolios; and
- keeping up-to-date with professional body guidance.

We will want to see evidence from members of your programme team about how this works, and how accessible and available staff development is. This information could be documentary or from meetings with staff on an approval visit. We may want evidence from practice placement educators about how you support them in their development. We will also want to know about any peer-observation or mentoring schemes that are run and what training is available to new lecturers.

3 Programme management and resource standards

3.8 The resources to support student learning in all settings:

3.8.1 must be effectively used; and

3.8.2 must effectively support the required learning and teaching activities of the programme.

Guidance

'Resources' in this context may include:

- student handbooks and module guides;
- information technology (IT), virtual learning environments and other specialist programmes;
- academic and support staff;
- buildings;
- texts and journals;
- equipment; and
- materials.

This standard means that resources must not only be available and appropriate for the delivery of the programme, but should also be used effectively. You could provide information about the resources students have access to, including how equipment booking systems are used, or how laboratory resources are used. You should show us evidence of available resources, which may include:

- IT facilities;
- lecture theatres;
- tutorial rooms
- presentation equipment;
- specialist labs;
- skills labs;
- studio space; and
- equipment.

We will want to be sure that resources are effectively used on placements, so, as part of your evidence to show that you meet this standard, you could show us how you support student learning in a practice placement setting. 'All settings' could refer to a second site where parts of the programme are delivered or where

programmes are delivered by a franchise arrangement. In cases such as these, we will need to see evidence of the resources that are available and used by students.

We will want to see evidence of how you monitor the use and effectiveness of the resources through your regular monitoring systems (See SET 3.3).

3 Programme management and resource standards

3.9 The learning resources (including the stock of periodicals and subject books), and IT facilities (including internet access), must be appropriate to the curriculum and must be readily available to students and staff.

Guidance

You should provide information about the learning resources provided for students, and for staff. On an approval visit you may also want to point out learning resources directly to us during the course of the tour of the library and facilities, including information technology (IT) facilities and any profession-specific resources. For the annual monitoring and major change processes, documentary evidence such as photographs of resources or library stock listings can be provided.

We will want to check the quantity, accessibility and currency of resources. We will want to be assured that

- stocks are kept up-to-date;
- there is enough money to replace stocks;
- there are enough core texts available (or that arrangements are made such as reserving certain titles for reference only, or short-term loan only); and
- opening hours mean that the facilities are available to students and staff.

We will also want to know how the students will be able to access the learning resources wherever their learning is based.

We will also need to make sure that your IT facilities are appropriate and readily available. If you are using a virtual learning environment such as WebCT or Blackboard, it can be helpful to provide evidence of how they are used.

3 Programme management and resource standards

3.10 There must be:

- 3.10.1 adequate and accessible facilities to ensure the welfare and wellbeing of students in all settings;
- 3.10.2 a system of academic and pastoral student support in place; and
- 3.10.3 a student complaints process in place.

Guidance

You will need to provide evidence of:

- the facilities available for student support;
- how students are informed about these facilities; and
- how accessible these facilities are.

Appropriate support facilities could include:

- a counselling service;
- a health centre; and
- the provision of medical advice.

We will want to see how your systems support all students, including mature students, disabled students, those not studying full-time, or those with caring responsibilities. You should provide evidence of the support available for students during periods of sick leave, carers' leave, or any other planned or unplanned leave. You may also like to provide details of financial help available, counselling and specialist teaching or learning facilities.

If you use a 'personal tutor' system, you will probably want to provide information about how this works to show how you meet this standard. You could also show how you support students with learning difficulties, including how they are supported during their placements. We may ask for evidence from students about how well they feel the support systems are working.

We will also want to see that there is a formal student complaints process in place and how the students are informed about the process. This process would apply to all areas of the education provider. We would expect the complaints process to detail how students' concerns about the programme or a related service are dealt with, as well as how allegations such as harassment or discrimination are dealt with. Complaints would differ from 'appeals' which are solely around the request for a review of a decision about progression, assessment or award. See SET 6.7.4 for more information.

See SET 5 about support for students on practice placements.

Other sources of guidance

- Quality Assurance Agency for Higher Education, Code of practice for the assurance of academic quality and standards in higher education – Section 5: Academic appeals and student complaints on academic matters
- Office of the Independent Adjudicator for Higher Education
- Scottish Public Services Ombudsman

3 Programme management and resource standards

3.11 Where students participate as service users in practical and clinical teaching, appropriate protocols must be used to obtain their consent.

Guidance

This standard is mainly concerned with preventing physical injuries and emotional distress, and helps to make sure that education and placement providers acknowledge risk factors. The level of involvement of students will vary between programmes, and from profession to profession. Professional bodies may have information about this.

Examples of activities where you will need to have guidelines for gaining students' consent include:

- disclosure of personal information;
- role play;
- bio-mechanical assessments of the arms and legs;
- patient positioning through manipulation of bony anatomical landmarks;
- practising profession-specific techniques; and
- experiential groups.

You should tell students how involved they are expected to be in the programme,

taking account of, for example, cultural differences or the medical health of the individual. We will want to know how and where this is made clear to students and applicants.

We will want to check that there are systems in place for gaining informed consent from students. Documentary evidence such as a copy of a consent form or the relevant guidelines will normally be required. On an approval visit we may also ask questions about this during meetings with students or practice placement providers.

3 Programme management and resource standards

3.12 Throughout the course of the programme, the education provider must have identified where attendance is mandatory and must have associated monitoring mechanisms in place.

Guidance

We will want to make sure that all students can meet all of the standards of proficiency, in order to be able to practise safely and effectively. This means, for example, that aspects of the programme which are essential to make sure that students meet the standards of proficiency will need to be compulsory. Attendance must be monitored, and lack of attendance should be followed up to make sure that students gain this knowledge before they complete the programme.

You should provide information to us to show when attendance is compulsory, and when it is not. You should show us how you monitor attendance, for example by the use of a class register. You must show the systems you have in place for doing this, for example, the action that you will take if students do not go to the compulsory parts of the programme. Where attendance is linked to assessment, you must explain the systems in place for monitoring assessments.

We will want to be assured that your requirements, and any consequences of missing compulsory teaching, are clearly communicated to students. This might be included, for example, in a student handbook or equivalent.

See the guidance under SET 5.10.

3 Programme management and resource standards

3.13 There must be a process in place throughout the programme for dealing with concerns about students' profession-related conduct.

Guidance

The purpose of this standard is to ensure that education providers play a role in identifying students who may not be fit to practise and assist them to address concern about profession-related conduct. The process should focus on identifying and helping to address concerns, but should also afford an appropriate range of outcomes, including providing for an award which does not provide eligibility to apply to the Register (see SET 6.7.2).

We will want to see evidence to support your choice of process, which must be appropriate to the programme and its delivery. It is important that there is accountability for any decision made and that the process is robust, fair and transparent.

We will want to see the process of communication between you, practice placement providers and practice placement educators. It will be important that you show the process is fair, that you have made all attempts to allow the student to address any issues of conduct and that a clear rationale is shown for all decisions made.

To show that you meet this standard, you could refer us to where the process is laid out, and how students are informed. This might be included, for example, on your website, or in your student handbook. You may want to use our Standards of conduct, performance and ethics to inform your process.

SET 4: Curriculum standards

Summary

This part of the standards is about the curriculum, making sure that people who complete the programme meet our standards for their professional skills and knowledge, and are fit to practise. We have created a set of curriculum standards which will allow you to design your own programme. You may choose to do this by following a curriculum framework document produced by a professional body, where this is available.

Overall guidance

Professional bodies may be involved in designing curriculum frameworks. We do not set more detailed standards for developing a curriculum or about the content of programmes and how they are delivered.

Different professional bodies are at different stages in relation to curriculum frameworks. Some have been involved in this for some time, certain professional bodies are beginning to develop this, and some professional bodies may not get involved in this area. For a list of documents, please see the back of this document, or visit www.hpc-uk.org.

More information

- Health Professions Council, Standards of proficiency
 - Health Professions Council, Standards of conduct, performance and ethics
 - Professional body:
 - curriculum outlines; and
 - codes of professional conduct.
- See the back of this document for a list of publications.
- Quality Assurance Agency for Higher Education, Subject benchmark statements
 - Quality Assurance Agency for Higher Education, Code of practice for the assurance of academic quality and standards in higher education
 - QAA Scotland, Scottish benchmark statements
 - Enhancement Themes initiative (Scottish higher education)

Example questions

- What drives the design of your curriculum?
- How would you explain the overall programme and how a student progresses from day one to completion?
- Can you explain how the learning outcomes of the programme meet the standards of proficiency?
- Would you explain how your students will be able to use a range of approaches in their practice after they qualify?
- What teaching methods do you use, and why?
- What is the reasoning behind the programme content, and the balance between the number of hours for different subjects?
- How do you make sure your curriculum stays relevant to current practice?

Detailed guidance

4 Curriculum standards

4.1 The learning outcomes must ensure that those who successfully complete the programme meet the standards of proficiency for their part of the Register.

Guidance

This is one of the most crucial areas within the Standards of education and training. For an approval visit you will be asked to show how your learning outcomes meet the individual standards of proficiency by completing the standards of proficiency cross-referencing document that we provide. Please make sure that you cross-reference against the generic, as well as the profession-specific, parts of the standards. Depending on the nature of any changes made to your programme, you may be asked to complete an updated version of the cross-referencing document for the annual monitoring or major change processes.

You should refer us to the module descriptors (or their equivalent) learning outcomes and module assessments which show how all of the standards of proficiency are covered by successfully completing the programme.

We will want to make sure that every student completing the programme can meet all of the standards of proficiency, no matter what option modules they choose, or if they have postponed their study.

You should also be aware that in considering how your students can meet the standards of proficiency at the end of their programme, you can take into account any reasonable adjustments you have made to the way that you deliver the programme to disabled students.

We recommend you include the Standards of proficiency in your reading lists.

Other sources of guidance

- Health Professions Council, Standards of proficiency
- Health Professions Council, A disabled person's guide to becoming a health professional

4 Curriculum standards

4.2 The programme must reflect the philosophy, core values, skills and knowledge base as articulated in any curriculum guidance for the profession.

Guidance

The area of curriculum guidance (or curriculum outline or framework) is one where many of the professional bodies for each profession are particularly involved. Professional bodies may be involved in designing curricula or similar detailed work around the philosophy, core values, skills and knowledge for their profession (see also the overall guidance for this section, above).

If the programme does not adhere completely to available curriculum guidance, then we would need to gather evidence about how, without following curriculum guidance, you feel the students completing your programme are able to practice safely and effectively.

In meeting this standard, you may refer to any relevant documents such as those produced by professional bodies and the QAA benchmark statements for the profession. We will want to see how any guidance is reflected in the programme.

Other sources of guidance

Profession-specific sources of guidance may include professional bodies':

- curriculum frameworks;
- practice placement standards;
- good-practice guidelines;
- clinical guidelines; and
- codes of practice.

You may also choose to consult competency frameworks from Skills for Health, the Sector Skills Council for the UK health sector.

Examples of multi-professional reference frameworks could include the following:

Education and quality

- Quality Assurance Agency for Higher Education, Subject benchmark statements
- Quality Assurance Agency for Higher Education, Code of practice for the assurance of academic quality and standards in higher education
- Quality Assurance Agency for Higher Education, A framework for higher education qualifications in England, Wales and Northern Ireland
- QAA Scotland, A framework for higher education qualifications in Scotland
- Scottish Credit and Qualifications Framework
- National Qualifications Framework in England, Wales and Northern Ireland
- Credit and Qualifications Framework in Wales
- QAA Scotland, Scottish benchmark statements

Legislation

- Disability Discrimination Act 1995
- Human Rights Act 1998
- Health and Safety at Work etc. Act 1974, and associated regulations
- The Children Act 2004

Health and social care policy

- National Service Frameworks
- National Occupational Standards
- NHS Knowledge and Skills Framework (Final draft 2004)

See the back of this document for a list of publications which you may find useful.

4 Curriculum standards

4.3 Integration of theory and practice must be central to the curriculum.

Guidance

We will be looking for evidence within your curriculum that theory and practice are combined within both the academic and practical elements of your programme.

You could show how you meet this standard specifically through your programme design. Also, your quality assurance and enhancement systems may provide

evidence of how you meet this standard, and you could highlight specific aspects of your programme.

See the guidance under SET 5.1 and SET 5.10.

4 Curriculum standards

4.4 The curriculum must remain relevant to current practice.

Guidance

Examples of evidence could include:

- evidence of regular contact with employers;
- staff CVs (which might include information about how you maintain the relevance of the curriculum through the ongoing clinical or research experience, or professional activity of members of the programme team);
- evidence of how research and scholarly activity affect the programme, and programme development;
- peer-reviewed journals used in the curriculum;
- QAA reports;
- evidence of the contribution that stakeholders (placement educators, employers, practitioners, past and present students, service users, and strategic health authorities) make in the programme planning process; and
- evidence of how changes in policy and health and social care developments affect your programme's development.

You may want to provide information about how current frameworks influence the profession, and so influence the education and training that you provide. You should demonstrate how the programme design and delivery:

- predicts or reflects change in health and social care and its organisation, changes in the law, and in service user need;
- reflects developments in a profession's research base and technological advances;
- develops students' ability to respond to changes in practice; and
- enables students to initiate change in practice to ensure continuing safe and effective practice.

4 Curriculum standards

4.5 The curriculum must make sure that students understand the HPC's Standards of conduct, performance and ethics, and their impact on practice.

Guidance

The Standards of conduct performance and ethics are broad, generic standards that all people registered by us must adhere to. These standards must be taught and met throughout a programme. They could be covered as part of a module on ethics, for example, or could be integrated into the curriculum as a whole.

We will want to see that the curriculum makes specific reference to the Standards of conduct, performance and ethics, and that students understand these standards.

We recommend that you include the Standards of conduct, performance and ethics in your reading lists.

Also see SET 3.13.

Other sources of guidance

- Health Professions Council, Standards of conduct, performance and ethics

4 Curriculum standards

4.6 The delivery of the programme must:

- 4.6.1 support and develop autonomous and reflective thinking; and
- 4.6.2 encourage evidence based practice.

Guidance

Students should be encouraged to consider:

- their own practice;
- the limits of their safe and effective practice; and
- their responsibility to make sure that they are safe practitioners when they complete the programme.

We will look for evidence of autonomous and reflective thinking and evidence-based practice through student-centred and independent learning, teaching and assessment strategies. Evidence could include:

- self-appraisal with planning and writing action plans;
- discussion groups;
- workshops;
- practice simulation and debriefing;
- reflective diaries or logs;
- professional development portfolios or personal development plans; and
- practice-placement reviews.

Students do not have to write a dissertation to meet this standard. Evidence-based practice could be demonstrated, for example, by a course on research methods, or by producing a research proposal.

Other sources of guidance

- Professional body:
 - codes of ethics; and
 - guidance on reflective practice.

See the back of this document for a list of publications.

4 Curriculum standards

4.7 The range of learning and teaching approaches used must be appropriate to the effective delivery of the curriculum.

Guidance

'Appropriate' means appropriate to the learning outcomes needed, both in terms of theoretical knowledge and the practical skills needed in professional practice.

You will need to show that you use a 'range' of learning and teaching approaches in delivering the programme. We do not specify how many approaches you should adopt, but it is unlikely that a programme which relied on one learning and teaching approach would be able to give evidence to show that it met this standard.

This area of SET 4 refers to both the academic and practice placement environments, so the information that you provide here may also be used to show how you meet SET 5 (which is concerned with practice placements).

The evidence supplied here will also be relevant to SETs 4.3, 4.4 and 4.6.

Other sources of guidance

- The Higher Education Academy (www.heacademy.ac.uk)

4 Curriculum standards

4.8 When there is inter-professional learning the profession-specific skills and knowledge of each professional group must be adequately addressed.

Guidance

Successful inter-professional learning can develop students' ability to communicate and work with others. Where inter-professional learning does exist, you must make sure that the learning of profession-specific skills and knowledge of each professional group is not compromised.

We appreciate that you may not be able to offer inter-professional learning because of factors beyond your direct control. It is therefore not a requirement.

To show how you meet this standard, you might provide information about which parts of the curriculum are shared, and which are not, with the reasons behind this. You may also wish to comment on how you see inter-professional education developing, and how it benefits those groups which are involved.

You should be aware that SET 4.1 and SET 6.1 require those who successfully complete the programme to meet the standards of proficiency for their part of the Register. The standards of proficiency contain inter-professional requirements such as the requirement to work with other professionals. It is therefore essential to know the importance of working with, and as part of, the wider health and social care team.

Other sources of guidance

- UK Centre for the Advancement of Interprofessional Education (www.caibe.org.uk)
- Creating an Interprofessional Workforce (www.cipw.co.uk)

SET 5: Practice placement standards

Summary

This section of the standards is about your practice placements. We do not normally need to approve individual practice placements, but we may visit practice placements if specific questions have been raised about whether your placements meet our standards.

You must retain ultimate responsibility for all placements. Whilst we recognise that you will work in collaboration with practice placement providers and educators, this standard seeks to ensure that you have overall responsibility and accountability for placement learning, and that adequate systems are in place to support it. We will want to see what systems you have put in place for approving and monitoring placements. If you share practice placement arrangements with another education provider, you will both need to separately show the approval and ongoing quality assurance of placements. You should also have arrangements in place to make sure that students can still achieve the learning outcomes that are specific to your programme. You should also have robust and effective systems surrounding the role of practice placement educators.

We need to see evidence of how you:

- manage your placements;
- manage assessments in placements;
- provide support;
- provide information to your students and practice placement providers; and
- monitor the placements to make sure that they continue to meet our standards.

Overall guidance

To make sure that you meet all of the standards for practice placements, we will normally want to see:

- a practice placement handbook for students; and
- a practice placement handbook for practice placement educators and coordinators.

You may produce documents which have a different title, or this information may be published in some other form, for example with other documents or online. As long as you can demonstrate that you meet all of the requirements of this standard, the format of this information is unimportant.

On an approval visit we would normally meet with practice placement educators, and we may ask questions about the information in the documents you have provided, or any areas which raised queries.

Please note that we do not have specific guidelines for the length, structure, organisation or timing of placements. Other organisations may have set requirements of a certain number of hours of contact, or a number of weeks that a placement must last. While you may want to meet these, you should be aware that these are not compulsory and you do not necessarily have to meet these for us to approve your programme. However, you must show that whatever

structures you have in place meet the SETs and standards of proficiency. See SET 5.2 for more information on this.

We will want to make sure that there is evidence of clinical governance within practice placement settings. This will normally be through the three main themes of:

- improving patient care – informed choice, philosophy of care, managing risk;
- professional development of staff – continuing professional development (CPD), education and training (lifelong learning) and investment in staff; and
- organisational development – showing evidence-based practice (research basis of care planning and delivery) and examples of good practice (making changes).

Overall clinical governance should be seen as a process for reviewing and improving patient care. So, we will need to make sure that there is evidence of a quality assurance system to support both the student and the patient within the practice placement setting.

Example questions

- How do you ensure you have sufficient placements and practice placement educators?
- How do you ensure that practice placement educators are trained and prepared to effectively supervise students?
- What form of contact do you maintain with practice placement educators?
- How often do you meet with practice placement providers?
- How do you ensure the quality of the placements provided?
- What support mechanisms do you have in place for practice placement educators?
- How do you measure student progression?

More information

- Department of Health, Placements in focus: guidance for education in practice for health care professions
- Northern Ireland Department of Health, Social Services and Public Safety, Review of clinical placements for the allied health professions

Detailed guidance

5 Practice placement standards

5.1 Practice placements must be integral to the programme.

Guidance

The structure of your programme must show that practice placements are an important part of the programme. You could show this by referring to:

- your ongoing partnership arrangements with your practice placement educators;

- the way that practice placement staff are supported and encouraged to take part in developing programmes;
- the way that the practice-placement learning outcomes and progression are in line with the rest of the programme; and
- your reasons for your placement structure.

It is good practice to have a formal arrangement with practice placement providers, wherever possible.

See the guidance under SET 3.1 and SET 4.3.

5 Practice placement standards

5.2 The number, duration and range of practice placements must be appropriate to support the delivery of the programme and the achievement of the learning outcomes.

Guidance

We will want to be sure that there are clear reasons for the chosen number, length and range of placements. We do not set the number, length or range of placements that you must include in your programme to meet our standards. However, you must show that there are an adequate number of placements available to support the delivery of the programme.

We will want to see that all students gain access to a wide range of learning experiences in a variety of practice environments which reflect the nature of modern practice, and the range of practice settings of the profession which they are preparing to enter. You may want to show how you support students in recording the way in which their practice placement environment relates to the main areas of practice of that profession.

We will also want to know how students are expected to progress in terms of their practical skills during the placements, and how the learning outcomes for the first placement are different from those of the final one. Evidence that could be provided might include a 'map' of the programme and details of assessment.

5 Practice placements

5.3 The practice placement settings must provide a safe and supportive environment.

Guidance

A 'safe and supportive environment' means one where staff and students have carried out relevant assessments of risk within the area of practice. It is also a place where safety policies and procedures are in place, and where policies and procedures are in place to support student learning. In showing how you meet this standard, you may include evidence of how you consider issues such as:

- physical risk from equipment;
- manual handling;
- risk from substances hazardous to health;
- radiation risk;
- fire safety;
- infection control;
- aggression;
- emotional stress; and
- lone working.

Placement induction processes should explain how students will be told about risks and safety issues.

Placements should follow all elements of clinical governance to protect the public.

You should also provide information about how you check the quality of your placement providers. It is good practice for practice placement providers to give you information about their health and safety policies. Information that you have provided for SET 3 about student support may also be relevant here, and you may want to cross-reference it.

You could also show how you help students to assess risk in practical situations, and to make professional decisions. (This kind of evidence may also be relevant in showing how you meet SET 4.6).

See the guidance under SET 5.10.

Other sources of guidance

Health and safety documents produced by:

- education providers;
- professional bodies;
- the NHS; and
- the IHCD (Awarding Body services for the Ambulance Service Association).

5 Practice placements standards

5.4 The education provider must maintain a thorough and effective system for approving and monitoring all placements.

Guidance

You will need to give us information about how you approve placements before you use them; how they are subsequently monitored on a regular basis; and also how they have links to the management of the programme. We will also want to see that you have policies in place to respond appropriately when any difficulties arise.

We do not normally visit placement settings, and give open-ended approval to programmes subject to monitoring. If the placement is with another organisation, you will need to show that you assess this effectively. We will want to see evidence of collaborative working with placement providers.

The evidence to support this could include:

- policies and processes for approving placements;
- examples of how these policies and processes are put into practice;
- details of systems for ongoing monitoring and assessment of placement providers;
- an explanation of how feedback from students is collected, analysed and acted upon;
- details of how you gain feedback from practice placement educators and coordinators, and make sure that channels of communication are clear;
- details of how you use feedback to inform processes; and
- copies of policies or details of processes for dealing with placement providers where difficulties arise.

See also the guidance under SET 3.10.

5 Practice placement standards

5.5 The placement providers must have equality and diversity policies in relation to students, together with an indication of how these will be implemented and monitored.

Guidance

You should give us information about how you make sure that equality and diversity policies are in place. There will need to be an indication that students on placements know how they can access these policies and what they should do if they feel that they have been discriminated against. We would normally expect that you have an audit/monitoring process for your placement providers and this will be part of that process.

Other sources of guidance

- Disability Discrimination Act 2005
- The Commission for Equality and Human Rights (www.equalityhumanrights.com)

5 Practice placements

5.6 There must be an adequate number of appropriately qualified and experienced staff at the practice placement setting.

Guidance

We will want to make sure that there are enough members of staff to support the students in their learning in a safe practice environment. However, we do not say how many staff must be present at each placement (nor that those staff must be registered with us) as we realise that there are different models of practice-based learning.

If the practice placement educators of certain placement providers are not registered with us, you may want to provide information about their professional qualifications (and their registration with other regulators or organisations, if appropriate). You should also show how their qualifications are appropriate to the practice placement, and to the learning outcomes of the programme as a whole. We may want to see job descriptions of practice placement educators and the recruitment policies of the placement providers so that we can see how the practice placement educators are qualified to teach or supervise students.

We are aware that different professions practise different models of practice placement, which affect factors such as the relationship between student and practice placement educator. For example, a one-to-one relationship may be ideal for many professions whereas there may be four or five students to one practice placement educator in others. We will look for evidence in documents and, in the case of an approval visit, at meetings with the programme team and practice placement educators, that you have clearly justified what you consider to be enough staff. This will include whether the number of staff is appropriate for the size of the student cohort. This may vary according to the level of support needed by the student.

5 Practice placement standards

5.7 Practice placement educators must:

- 5.7.1 have relevant knowledge, skills and experience;
- 5.7.2 undertake appropriate practice placement educator training; and
- 5.7.3 unless other arrangements are agreed, be appropriately registered.

Guidance

We will want to be sure that your practice placement educators have the knowledge, skills and experience to support students and that they provide a safe environment for effective learning. We do not set specific requirements about the qualifications and experience that they must have.

We expect that you will train all new practice placement educators, and follow this up with regular refresher training. We will want to see evidence of the content, broad learning outcomes and any assessments or qualifications from all practice placement educator training. Where practice placement educators are involved in assessment, we will want to see how they are prepared to deliver both formative and summative assessment, and how you ensure consistency across all placements.

We do not set specific requirements for this training, either in terms of length or content, as we feel that this level of detail is best decided by individual education providers. You may choose to follow the example of other education providers, or follow best-practice advice published by other organisations. Your training may take a variety of forms, which may include:

- attendance at your site;
- training in the workplace;
- online support;
- written support; and
- peer-support through workshops and meetings.

Professional bodies may offer accreditation schemes for practice placement educators which you may want to adopt. If you take part in one of these schemes, you could give us information about how it works and how it is implemented.

Normally, your practice placement educators will be registered with us in the relevant profession. However, there are other entirely appropriate practice placement educators who do not have a profession-specific background which matches that of the student. For example, occupational therapists may supervise physiotherapy students in areas such as hand therapy, and nurses may supervise radiographers in aseptic techniques. If you choose to use practice placement educators who are not registered with us, you will need to give us information about their experience, qualifications and training relevant to the practice placement.

See the guidance under SET 5.6 and SET 5.9.

5 Practice placement standards

5.8 There must be collaboration between the education provider and the practice placement provider.

Guidance

We will need to be sure that you regularly work together with your practice placement providers and educators, and that the collaboration and communication happens in both directions. This might take the form of regular meetings or other channels of communication with your practice placement providers and educators. You may also use a system where providers comment on their experience of supervising students on placement, or develop ways in which practice placement providers and educators influence the structure of the practice placements or feed into programme planning and design. Any information that you can provide which shows a partnership and ongoing relationship, and not one that only happens around the time of programme approval and routine monitoring, will help to show us how you collaborate effectively with practice placement providers.

5 Practice placement standards

5.9 Students, practice placement providers and practice placement educators must be fully prepared for placement which will include information about an understanding of:

- 5.9.1 the learning outcomes to be achieved;
- 5.9.2 the timings and the duration of any placement experience and associated records to be maintained;
- 5.9.3 expectations of professional conduct;
- 5.9.4 the assessment procedures including the implications of, and any action to be taken in the case of, failure; and
- 5.9.5 communication and lines of responsibility.

Guidance

You will need to show not only that information is provided to students, practice placement providers and practice placement educators, but also that this information is accessible to them, in an appropriate format. You should also show that information is provided in a timely fashion – to allow enough time to answer any questions before practice placements commence.

You might want to show how the information is provided, and how you make sure that all parties have understood the information. This might be through follow-up training, teaching, or opportunities for discussion. Information could be in your student handbook, practice placement handbook, or equivalent. We may look for evidence to show that the students and practice placement educators feel well-informed about what is expected of them and their responsibilities during a placement. It is good practice to have in place a formal arrangement with placement providers, wherever possible.

Examples of practical information to provide to students could include:

- dates, times and venues;
- placement induction materials; and
- location details, such as maps.

See the guidance under SET 5.8.

5 Practice placement standards

5.10 Learning, teaching and supervision must encourage safe and effective practice, independent learning and professional conduct.

Guidance

We will want to be sure that your placements prepare your students for entry into their profession. You should provide evidence of how your programme prepares your students for independent learning on their placement, and show how they are equipped with the resources and skills to work more independently. We will want to see information about how students learn about the behaviour expected of them on their placement. You could relate this to any teaching about our standards.

The evidence that you could refer to might include:

- reflective logs or diaries;
- professional development portfolios;
- tutorial records; and
- placement reports.

This kind of information could also be relevant to showing how you meet SET 4.6 and SET 5.9.

Other sources of guidance

- Health Professions Council, Standards of conduct, performance and ethics
- Health Professions Council, Standards for continuing professional development
- Professional body standards of conduct and codes of ethics

5 Practice placement standards

5.11 A range of learning and teaching methods that respect the rights and needs of service users and colleagues must be in place throughout practice placements.

Guidance

Students may learn on placement in different ways, and different practice placement educators may structure the learning and teaching according to their own preferences and experience, or the individual needs of the students. It is important that whatever the methods used, these must respect the needs of service users and colleagues.

We will want to see evidence that you have a system in place which makes sure that, wherever possible, service users are aware that students are involved in their care.

SET 6: Assessment standards

Summary

This part of the standards of education and training is about how you assess your students, to make sure that they:

- meet the requirements of your programme;
- meet our standards of proficiency; and
- are assessed fairly and consistently.

Overall guidance

You may want to give us a copy of your assessment strategy, or equivalent, as well as any other information about assessing your programme.

We will need to see how you make sure that assessment of practice placements is thorough, consistent and fair. So, information about how you train practice placement educators, and how marks are moderated, will also be relevant here.

Example questions

- Why have you chosen particular types of assessment for each module?
- What is your policy on resits, for both academic and placement components?
- How does your assessment meet external reference frameworks?
- Is there a system for continuous assessment and ongoing feedback for students on a practice placement?
- What happens if a student is failing in practice placements but is doing well in academic subjects?
- How does the design of your assessment procedure produce students who are fit to practise?
- Do you have the option to award an aegrotat award? If so, do you make it clear that an aegrotat means you cannot register with us?
- In the absence of special circumstances, do students have the right to appeal assessment decisions?
- Is your external examiner registered with us?

- Higher Education Academy
- Learning and Teaching Support Network, Generic Centre Assessment Series

Detailed guidance

6 Assessment

6.1 The assessment strategy and design must ensure that the student can achieve the standards of proficiency for their part of the HPC Register.

Guidance

When you assess a student, you must make sure that you are testing not only academic and theoretical learning and knowledge, but also the practical application of skills to enable the student to practise their profession safely and effectively.

We will want to make sure that, on completing the programme, students meet the standards of proficiency of their profession.

We will want to make sure that your documentary evidence clearly sets out your assessment strategy and includes direct reference to the learning outcomes and associated assessment methods. This provides a direct link to fitness to practise. We would expect each module descriptor to explain the assessment methods used for that module.

We will need to see information about the:

- pre- and co-requisites in your programme;
- compulsory and optional modules;
- individual module passmarks;
- number of resit attempts allowed (and within what period of time);
- number of module resits allowed within any one year;
- maximum number of resits allowed every year for practice placement modules;
- compensation and condonement regulations;
- maximum length of a programme; and
- maximum time a student can take to complete the programme.

Although we do not set limits on, for example, the number of resit attempts allowed, you should show us how your policy on resits strikes a suitable balance between the need to support students, and the need to make sure that those who successfully complete the programme achieve the standards of proficiency.

6 Assessment standards

6.2 All assessments must provide a rigorous and effective process by which compliance with external-reference frameworks can be measured.

Guidance

You should provide information about how your assessment methods are thorough and effective, and also about how your programme meets any relevant, external-reference frameworks. An example of this would be if your programme is a pre-registration Masters programme: showing how your programme meets the requirements of a Masters programme as well as meeting the standards of proficiency could be part of the evidence for this standard.

Other sources of guidance

- Any relevant internal regulations

- Professional body guidelines
- Quality Assurance Agency for Higher Education, Subject benchmark statements
- Quality Assurance Agency for Higher Education, Code of practice for the assurance of academic quality and standards in higher education, assessment of students
- Knowledge and Skills Framework (Department of Health 2003)
- Scottish benchmark statements

See the list at the back of this document for a list of publications which you may find useful.

6 Assessment standards

6.3 Professional aspects of practice must be integral to the assessment procedures in both the education setting and practice placement setting.

Current guidance

'Professional aspects of practice' may include, for example, the students' familiarity with:

- autonomy and accountability;
- values and ethics; or
- their understanding of the nature of professional regulation, and the responsibilities this involves.

You could provide information about how your assessment procedures assess this area of learning. For example, you may provide information about a specific module which covers professional issues, with information about how this is assessed. Alternatively, this information may be included in the placement handbook, learning log and other relevant parts of the curriculum.

Other sources of guidance

- Health Professions Council, Standards of conduct, performance and ethics
- Health Professions Council, Standards of proficiency

6 Assessment standards

6.4 Assessment methods must be employed that measure the learning outcomes and skills required to practise safely and effectively.

Guidance

You will need to provide information about your chosen assessment methods, including your reasons for using the different assessment methods that are used for different parts of the programme. You should show how your chosen methods are in line with the learning outcomes of each module. We will need to be assured that, whatever assessment methods are applied, they ensure that those who successfully complete the programme can practise safely and effectively.

6 Assessment standards

6.5 The measurement of student performance must be objective and ensure fitness to practise.

Guidance

We will want to see information about how you monitor and measure student performance, and what criteria you use to assess students who are at different stages in their learning. We will also want to see how your guidelines or objective criteria are used to ensure students are fit to practise.

Your assessment strategy may contain information about the criteria used for assessment. The moderation of marks, and the way that students are assessed on their practice placement, may also be relevant here.

We do not normally expect to see samples of students' work. However, on an approval visit we may ask students about the level of feedback they receive on their assignments and whether they feel it is enough.

6 Assessment standards

6.6 There must be effective monitoring and evaluation mechanisms in place to ensure appropriate standards in the assessment.

Guidance

You will need to provide information about how your programme is monitored. This might include, for example, information about your validation or review process (if this applies), or how you use comments from your external examiner. We will want to be assured that your criteria are consistently applied, and that they are appropriate for:

- your programme;
- the students' progression; and
- making sure that students can meet the standards of proficiency when they complete the programme.

We will want to see that internal and external moderation is carried out. Internal moderation would normally cover marking and double-marking systems. External moderation would cover the role and responsibilities of external examiners or advisors. You could give us copies of your regulations and policies as well as the external examiner's reports and responses to these reports. We may want to see the details of your attrition rates which would normally be included in your own internal monitoring documents.

We will use curricula vitae and staff profiles to assess whether educators from the programme team have experience in assessment (for example, where staff act or have acted as external examiners for other education providers). We will then be able to see how internal moderation systems of the education provider compare with external standards.

6 Assessment standards

6.7 Assessment regulations must clearly specify requirements for:

6.7.1 student progression and achievement within the programme;

Guidance

Your assessment regulations must make it clear how you assess students to make sure of, and recognise, their continuing progression within the programme. These regulations must be clear so students can understand what is expected of them at each stage of the programme, and must also ensure that staff can apply assessment criteria consistently to students' work. We will also want to see how you decide what prevents a student from progressing and the options that are available for a failing student.

We will want to see how information about the overall requirements of your programme is made available to students. It should be clear to students what they are expected to achieve. This may include credit and non credit related elements.

6 Assessment standards

6.7 Assessment regulations must clearly specify requirements for:

6.7.2 approved programmes being the only programmes which contain any reference to an HPC protected title or part of the Register in their named award;

Guidance

It is important that there is no confusion about which programmes are approved by us, and which are not. Students who are not eligible to apply for registration should not be given an award that makes a reference to a protected title. Step-off or exit awards should be named in such a way as to make it clear they do not lead to eligibility to apply for registration. Some education providers give these students awards with titles like 'Healthcare studies' which reflects the academic content achieved, but does not give the impression that they are eligible to apply for registration. We will want to see that programme titles are clear, and that applicants, students, staff and the public understand who is eligible to apply for registration with us, and who is not.

6 Assessment standards

6.7 Assessment regulations must clearly specify requirements for:

6.7.3 an aegrotat award not to provide eligibility for admission to the Register;

Guidance

It must be clear to students and to staff that students who are awarded an aegrotat award are not eligible to apply for registration. To show that you meet this standard, you could refer us to where this policy is laid out, and how students are informed, for example on your website or in your student handbook.

6 Assessment standards

6.7 Assessment regulations must clearly specify requirements for:

6.7.4 a procedure for the right of appeal for students;

Guidance

You should give us information about your appeals procedure. An appeals procedure should outline how a student can request a review of a decision made on their assessment, progression or achievement. We will want to make sure that students are told about the appeals procedure. This should cover how the procedure works, how it is judged, and by whom.

We will also expect to see clear information for students about where they should go for advice on your appeals procedure.

6 Assessment standards

6.7 Assessment regulations must clearly specify requirements for:

6.7.5 the appointment of at least one external examiner from the relevant part of the Register, unless other arrangements are agreed.

Guidance

This standard means that assessment regulations must require at least one external examiner (who must be registered in the relevant part of the Register) for each programme unless any other arrangements have been agreed with us in advance. We will want to be sure that there is an appropriate reason for appointing an examiner who is not from the relevant part of the Register, and that the person is appropriately experienced and qualified. However, we do not play any part in their appointment.

If you do not have an external examiner in place at the time of an approval visit, we will want to be sure that your regulations show that one will be appointed.

Glossary

This appendix defines or explains terms used in this document.

Aegrotat

An award to a student who was unable to complete the degree due to illness.

Accreditation of prior (experiential) learning (AP(E)L)

The process for accessing and, where appropriate, recognising prior (experiential) learning. In a credit-based system, this recognition normally results in students being awarded credit which can be counted towards the completion of a programme. Experiential learning recognises learning achieved outside of a formal education or training system. The process is often referred to as 'credit transfer'.

Approval

The process of validation and accreditation that leads to decisions about the ability of a programme to meet the requirements of the standards of education and training of the regulatory body.

Council

The Health Professions Council.

Curriculum

A structured plan of intended learning outcomes, underpinning knowledge, skills, behaviour and associated learning experiences. The learning plan is generally organised as a sequenced combination of modules so that a student can achieve specified educational and training outcomes. The curriculum includes the syllabus, teaching guides, an assessment guide and required learning resources.

DELNI

The Department for Employment and Learning, Northern Ireland.

Education and Training Committee

The statutory committee at the Council with responsibility for education and training matters.

Education provider

The establishment at which a programme is delivered or by which a qualification is awarded.

External reference framework

This term encompasses any legislative and external standards.

HEFCE

The Higher Education Funding Council for England.

HEFCW

The Higher Education Funding Council for Wales.

Practice placement

A period of clinical or practical experience that forms part of an approved programme.

Practice placement educator

A person who is responsible for the education of a student during their period of clinical or practical experience.

Practice placement provider

The organisation that provides a period of clinical or practical experience for a student.

Programme

The academic provision, practice placements, assessment, qualification and other provisions of the education or training provider, which in totality form the programme for approval purposes.

Programme leader

Person who has the overall responsibility for a programme.

Register

The register kept by Council or any part or parts thereof.

Registrant

A person who is currently on the HPC Register.

SFC

The Scottish Funding Council.

Site

A location where the programme or part of the programme is delivered.

Standards of conduct, performance and ethics

A statement of standards which registrants must read and agree to abide by in order to remain on the Register.

Standards of education and training

The standards which education providers must meet to ensure that all those completing an approved programme meet the standards of proficiency.

Standards of proficiency

The standards required of registrants and those applying for registration for the safe and effective practice of their profession.

Further information
